Samad Z, Boyle S, Ersboll M, Vora AN, Zhang Y, Becker RC, Williams R, Kuhn C, Ortel TL, Rogers JG, O'Connor C, Velazquez EJ, Jiang W, for the REMIT Investigators

Sex Differences in Platelet Reactivity and Cardiovascular and Psychological Response to Mental Stress in Patients with Stable Ischemic Heart Disease: Insights From the REMIT Study.

J Am Coll Cardiol 2014;64:1669–78.

In Figure 1 on page 1674, the bars for male and female are switched. Thus, females expressed a greater increase in negative emotion and a greater decrease in positive emotion compared to men. However, the Figure 1 shows the opposite. Below is the correct Figure 1.

The authors apologize for this error.

NOTICE

In the recent paper “Do Current Clinical Trials Meet Society’s Needs? A Critical Review of Recent Evidence” published in the October 14 issue of *JACC* (J Am Coll Cardiol 2014;64:1615–28), the authors wish to point out that HORIZONS-AMI was an investigator-initiated trial, as was HEAT-PPCI. Both trials did receive some funds from The Medicines Company, but in both instances the company had no involvement in any trial processes.
